HUNT Dimming Announces *Simplicity*[®] PhotoSlide[™] Lighting Controller

Innovative controller combines manual dimming and daylight harvesting.

FORT COLLINS, CO, May 30, 2014 ... HUNT Dimming, the Fort Collins, CO-based manufacturer of lighting products, has launched the ***Simplicity*[®] PhotoSlide[™]** lighting controller, which combines manual dimming and daylight harvesting control in a single wall-mounted device.

The versatile slide controller allows users to switch (ON/OFF) or dim (continuous raise/lower without flicker from full output to five percent) both fluorescent and LED lighting, with a choice of 120V or 277V power supply and single-pole or three-way configuration. Additionally, an onboard light sensor automatically reduces light output and energy consumption in response to available daylight by maintaining a target illumination level, providing ongoing energy cost savings during daylight hours. Ideal for any space receiving ample daylight and requiring manual control, from classrooms to private offices, the PhotoSlide[™] offers opportunities for commercial building energy code compliance in new construction and a simple energy-saving retrofit in existing buildings.

As a low-voltage control device, the PhotoSlide[™] controller installs quickly and easily, using only low-voltage wiring. Up to 50 dimmable ballast-driven light fixtures can be connected to a single controller.

For more information, call (970) 484-9048 or visit www.huntedimming.com.

ABOUT HUNT DIMMING: HUNT Dimming develops and manufactures a full-line of innovative lighting solutions under the ***Simplicity*[®]** brand.
